The program is a command-line application that accepts user input.
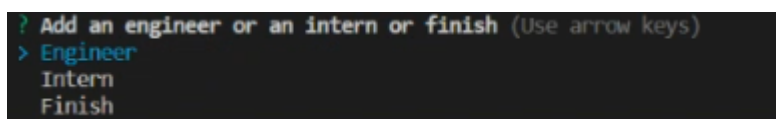

When the team members and their information was inputted then an HTML file is generated that displays a nicely formatted team roster based on user input. If an email address in the HTML is clicked, then the default email program opens and populates the to field of the email with the address.

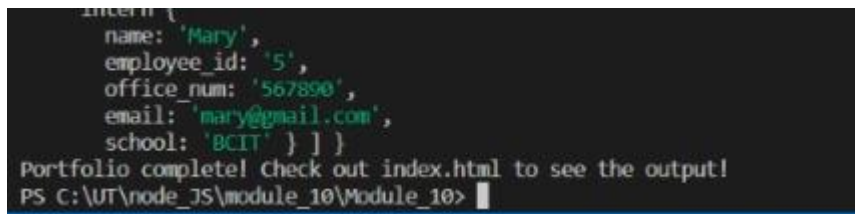

when the GitHub username is clicked, the web browser will be linked to GitHub profile.

After the application start, enter the team manager's name, employee ID, email address, and office number. After it, a menu will be shown up and using the arrow key to select add the engineer or Intern or finish the program.

After select Finish at the menu and exit the application, the HTML is generated and store in the dist folder.
